

Mobile eForm

Windows Mobile version of eForm electronic forms data entry software is now available through our partner TPAlpha Limited. The mobile version of popular web-based software allows users to access forms on their Windows Mobile enabled devices using Internet Explorer, to complete the forms and submit data back to central eForm repository.

Mobile eForm is specifically tuned for restricted mobile screen real estate facilitating ease of use and convenience for mobile users. Both activity and non-activity type forms are supported and all built-in field types are operational in the mobile version.
